

## Who Is Correlata and How We Help

Correlata is a leading software solution for large scale enterprise data centers. By providing both horizontal and vertical insight across all data center resources, IT becomes empowered to leverage the hardware and software for management as business drivers, but also allows visibility into those un-used or under-performing assets, to reallocate, remove, or repair and mitigate to improve a data centers overall functioning capability.

### What Does Correlata Offer to IBM?

patented software to assess all of a data center's resources

horizontal and vertical assessment for accurate budgeting and planning

simple add-on to any data center initiative

increased savings in operational, hardware, and software

access from Legacy, UNIX, Linux and X86

Engineers, Developers, Ph.D., Fortune 500 leaders make up Correlata's Management and Board

13

Technical recognition and business achievements since 2010

### What Differentiates Correlata from Others?

- 1 Provides a full audit about a data center's operations and infrastructure environment, highlighting the gaps between IT's provisioned and allocated resources.
- 2 Works with existing platforms and uses a unique data-fusion analytic concept to provide visibility across all data center operations, systems, and applications.
- 3 Customers' market includes enterprise, service provider and federal agencies worldwide.
- 4 Lower risk and decreased cost of operations for C-Suite.
- 5 Translate operations' API's to key business key indicators.
